

Highly sensitive environments require industry knowledge and protocols. With UG2's specialized services, we offer a highly trained, deeply experienced workforce that can address your specific needs and operating procedures.

In a highly sensitive lab, cleanroom, or pharmaceutical research environment, cleanliness is crucial—but it should never come at the expense of ongoing projects or put equipment at risk. That's why UG2's life science teams have the background, training, knowledge, and leadership to support these specialized spaces.

From room pressurization and fume hood disassembly to glass washing and inventory restocking, our professionals are familiar with the type of tasks necessary to keep life science areas clean and disinfected, without disruption to operations. Our life science facility services are tailored to your needs, every step of the way.
